What do we mean by fast simulation?

Fast simulation **is not** Geant4 simulation that ‘magically’ produces results in less time.

What do we mean by fast simulation?

Fast simulation **is not** Geant4 simulation that ‘magically’ produces results in less time.

Fast simulation **is** a trade-off between simulation time and accuracy.

Time is gained by performing less operations in complicated region → no detailed physics of Geant4 → *parameterisation*.

What do we mean by fast simulation?

Fast simulation **is not** Geant4 simulation that ‘magically’ produces results in less time.

Fast simulation **is** a trade-off between simulation time and accuracy.

Time is gained by performing less operations in complicated region → no detailed physics of Geant4 → *parameterisation*.

Fast simulation hooks in Geant4 allow to overtake control over particles in certain regions – user decides what happens and when/if they return to the detailed simulation.

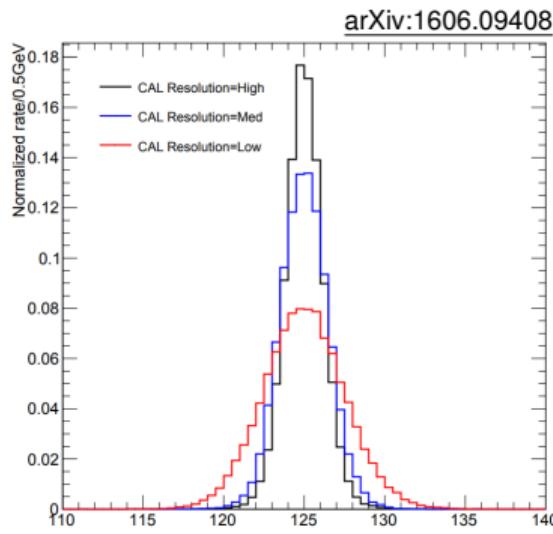

Why to use parameterisation / fast(er) simulation?

- ▶ Physics studies that assume certain detector performance
 - ▶ to speed-up simulation of already known detector (e.g. extracted efficiency/resolution from detailed simulation)

Why to use parameterisation / fast(er) simulation?

$$\frac{\sigma_E}{E} = \frac{a}{\sqrt{E}} \oplus c$$

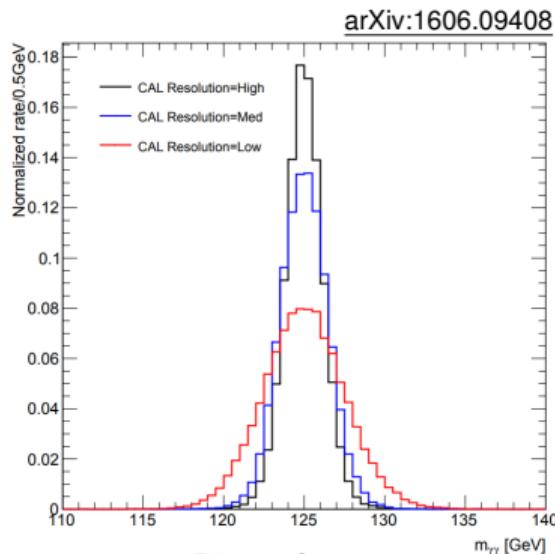

$a=20\%$, $c=2\%$

$a=10\%$, $c=1\%$

$a=6\%$, $c=0.7\%$

- ▶ Physics studies that assume certain detector performance
 - ▶ to speed-up simulation of already known detector (e.g. extracted efficiency/resolution from detailed simulation)
 - ▶ to study impact of detector performance on physics observables (example in the plot: calorimeter resolution on Higgs mass)

Why to use parameterisation / fast(er) simulation?

$$\frac{\sigma_E}{E} = \frac{a}{\sqrt{E}} \oplus c$$

$a=20\%$, $c=2\%$

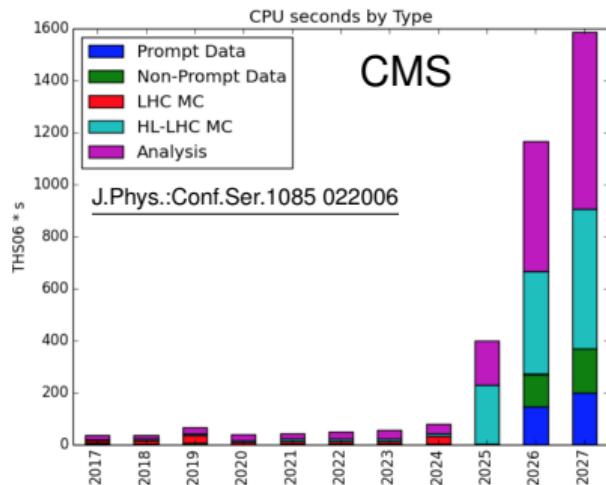

$a=10\%$, $c=1\%$

$a=6\%$, $c=0.7\%$

- ▶ Physics studies that assume certain detector performance
 - ▶ to speed-up simulation of already known detector (e.g. extracted efficiency/resolution from detailed simulation)
 - ▶ to study impact of detector performance on physics observables (example in the plot: calorimeter resolution on Higgs mass)
 - ▶ to study in detail only one detector, with others parametrised (e.g. parametrised tracker in front of in-detail calorimeter)

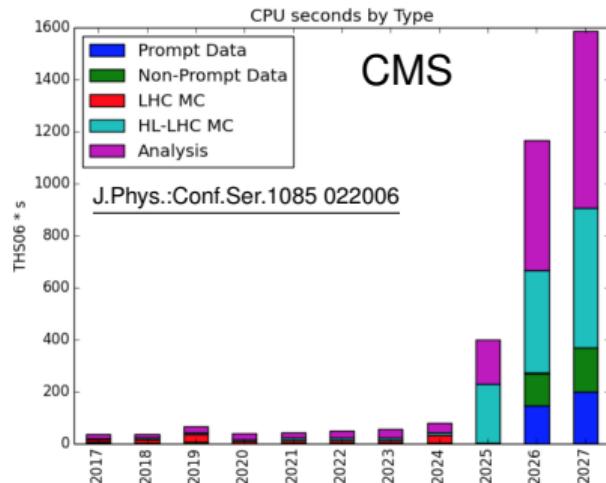

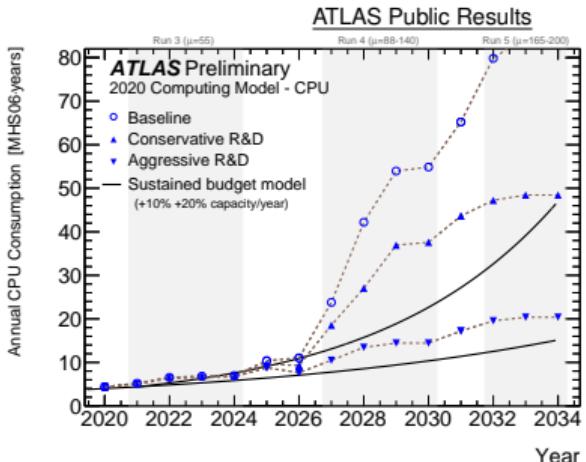

Why to use parameterisation / fast(er) simulation?

- ▶ To speed-up simulation in order to generate more data within same CPU time
 - ▶ to match available computing resources;
 - ▶ to provide sufficient amount of simulation data for comparison with the experimental data;

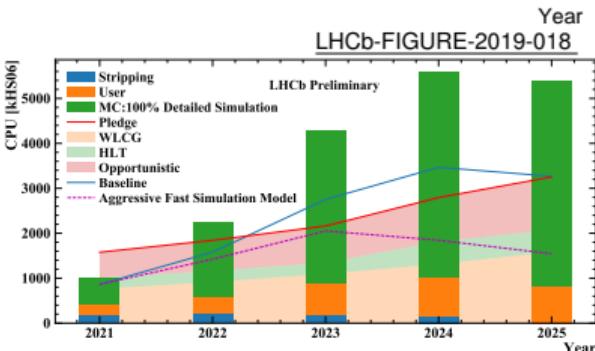

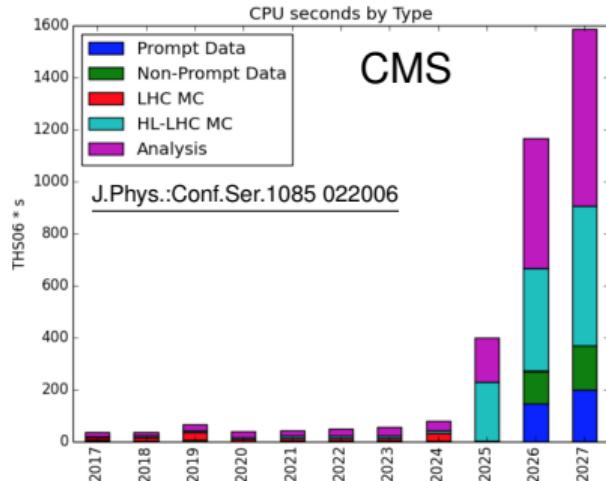

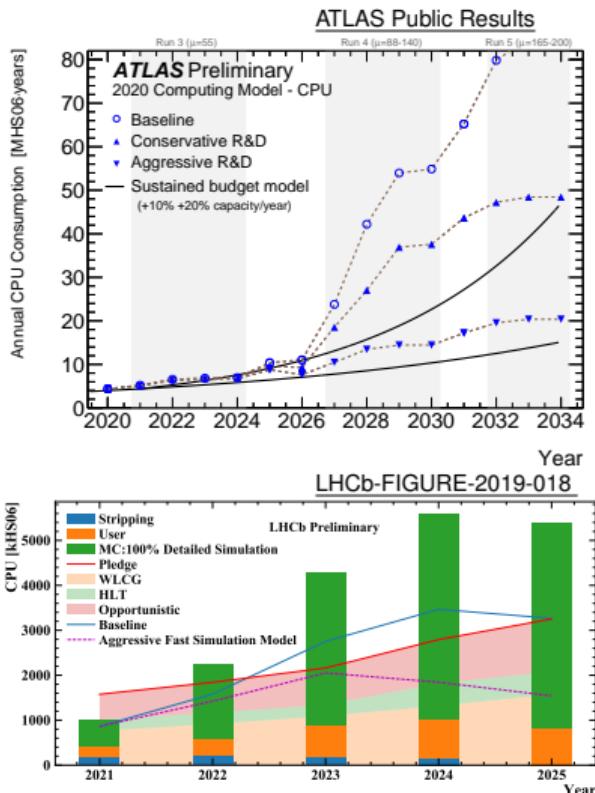

Why to use parameterisation / fast(er) simulation?

- ▶ To speed-up simulation in order to generate more data within same CPU time
 - ▶ to match available computing resources;
 - ▶ to provide sufficient amount of simulation data for comparison with the experimental data;

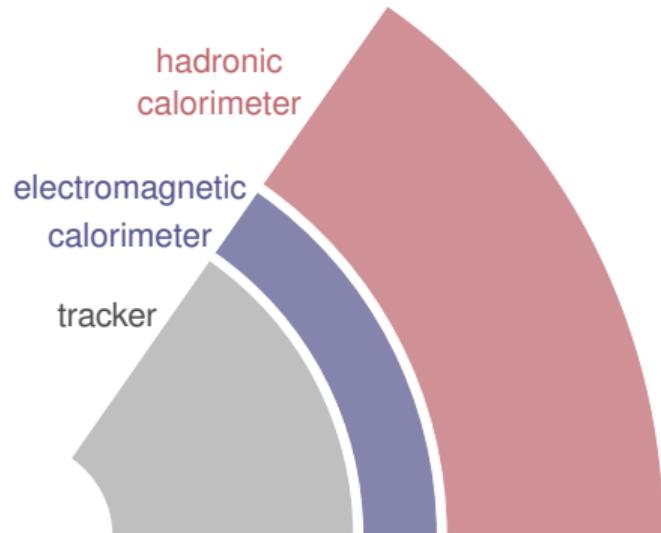

Why to use parameterisation / fast(er) simulation?

 - ▶ to match available computing resources;
 - ▶ to provide sufficient amount of simulation data for comparison with the experimental data;

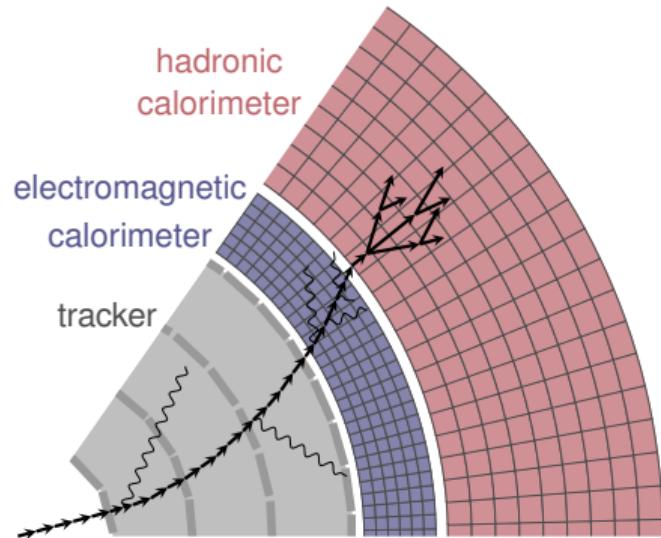

How we simulate particles?

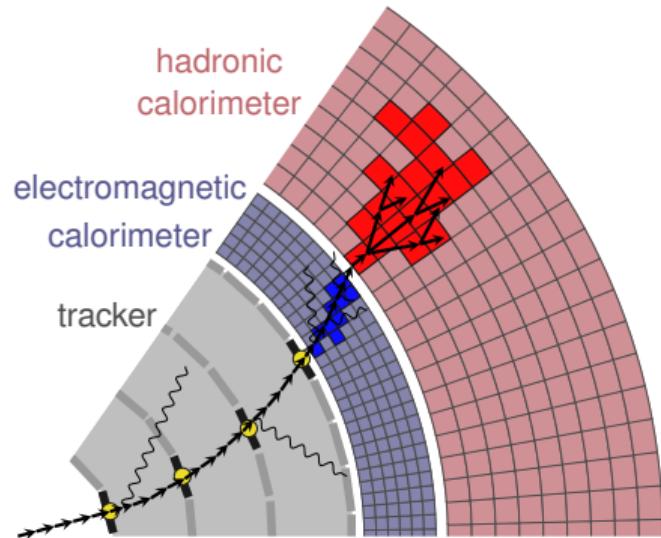

How we simulate particles?

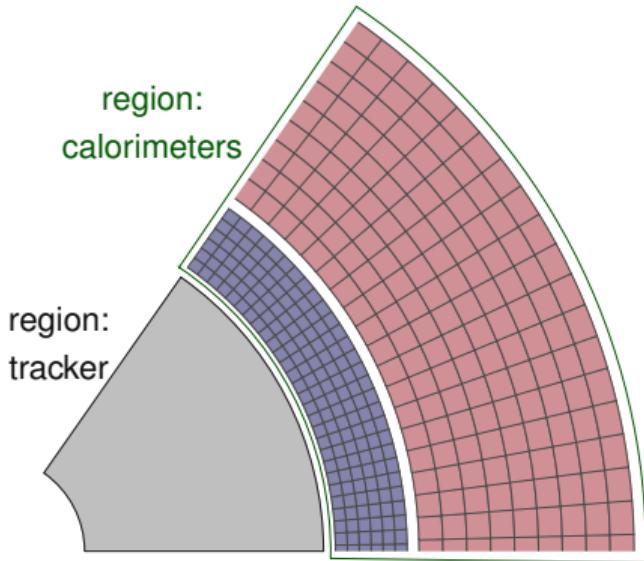

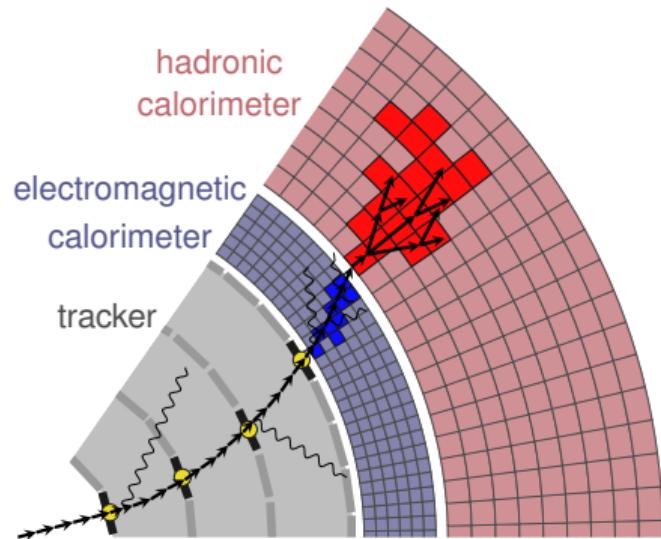

How we simulate particles?

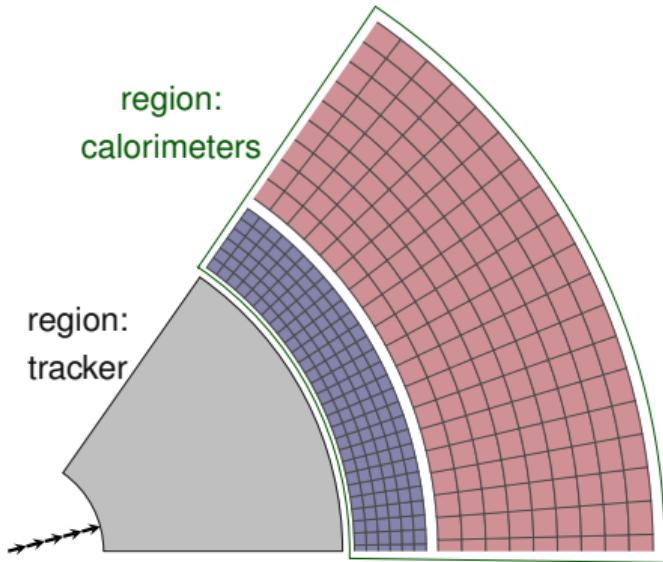

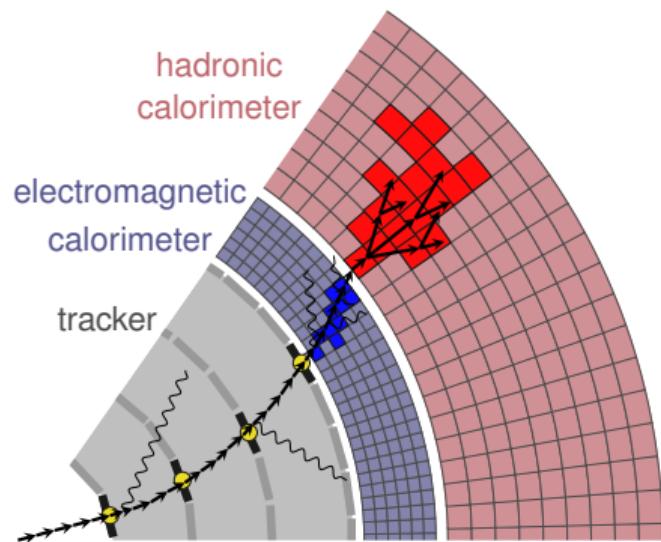

How we simulate particles?

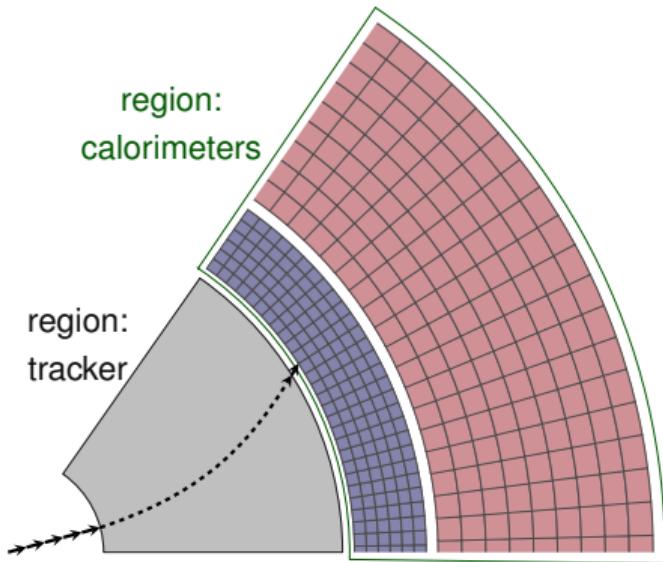

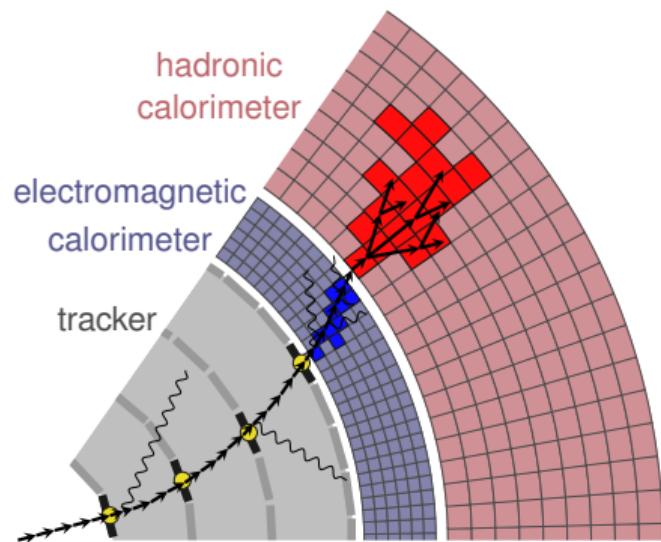

How we simulate particles?

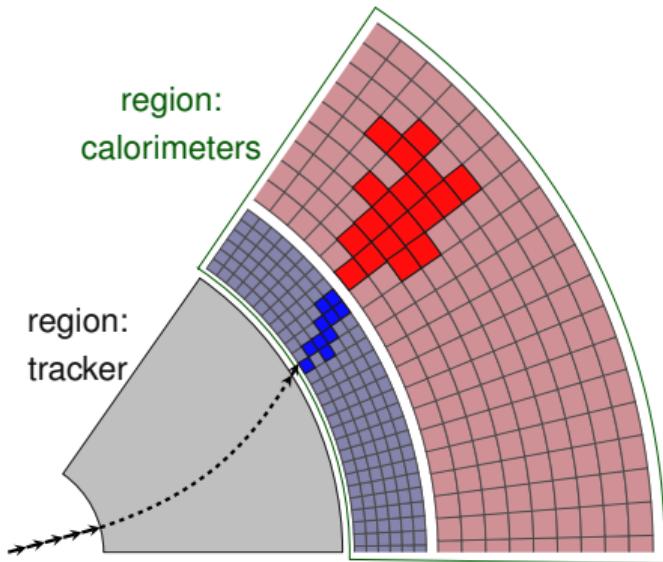

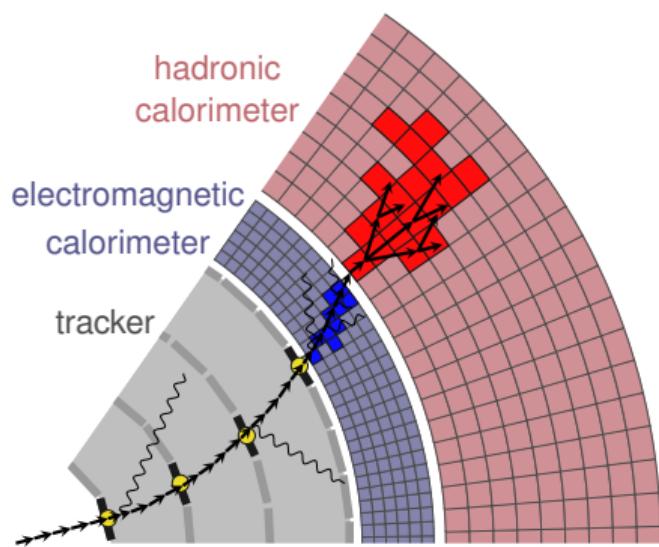

How we simulate particles?

How we simulate particles?

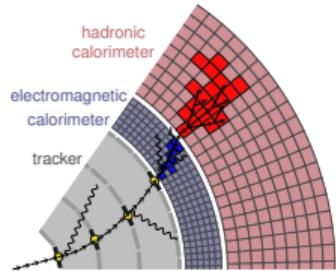

How we simulate particles?

Fast simulation is a shortcut to the standard tracking and detailed simulation.

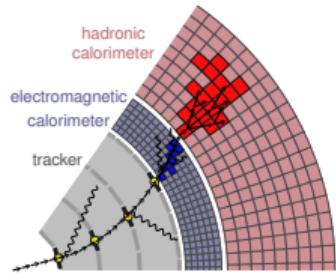

Simulation of particle passage

detailed / “full”
simulation

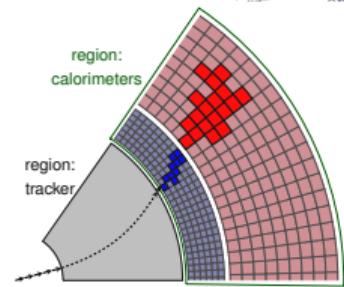

- ▶ detailed detector description
- ▶ definitions of particles and processes
- ▶ transport in e-m field

Simulation of particle passage

detailed / “full”
simulation

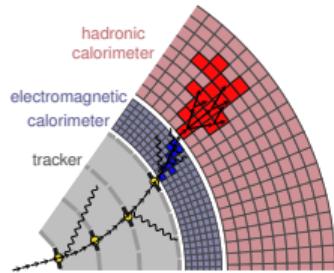

parameterisation
/ “fast” simulation

- ▶ detailed detector description
- ▶ definitions of particles and processes
- ▶ transport in e-m field

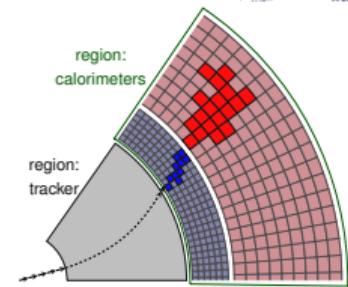

- ▶ **where** particles are parametrised
- ▶ **which** particles
- ▶ **how/what happens**

Simulation of particle passage

detailed / “full”
simulation

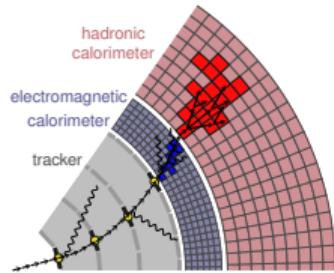

parameterisation
/ “fast” simulation

- ▶ detailed detector description
- ▶ definitions of particles and processes
- ▶ transport in e-m field
- ▶ Geant4 a standard toolkit

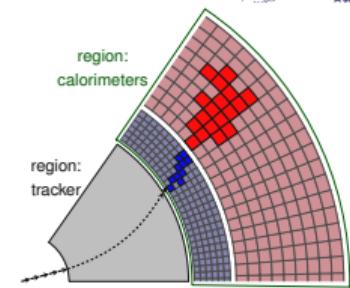

- ▶ **where** particles are parametrised
- ▶ **which** particles
- ▶ **how/what happens**
- ▶ detector / use-case dependent

Simulation of particle passage

detailed / “full”
simulation

parameterisation
/ “fast” simulation

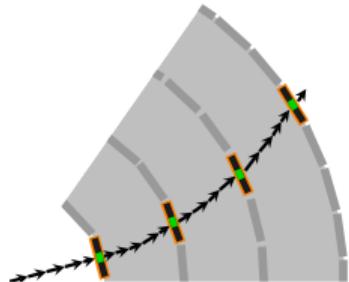

- ▶ detailed detector description
- ▶ definitions of particles and processes
- ▶ transport in e-m field
- ▶ Geant4 a standard toolkit

- ▶ **where** particles are parametrised
- ▶ **which** particles
- ▶ **how/what happens**
- ▶ detector / use-case dependent

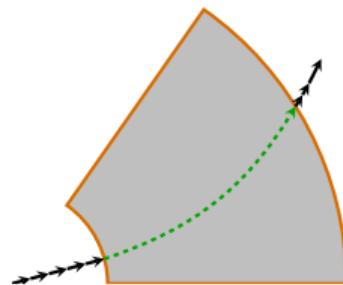

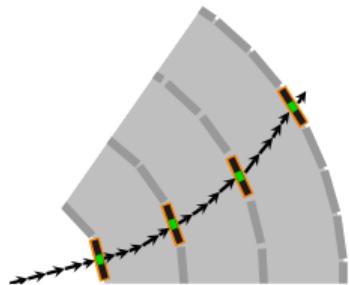

Defining both ‘full’ and ‘fast’ simulation within one framework (Geant4) offers great flexibility to seamlessly mix both types.

Parameterisation may be realised within:

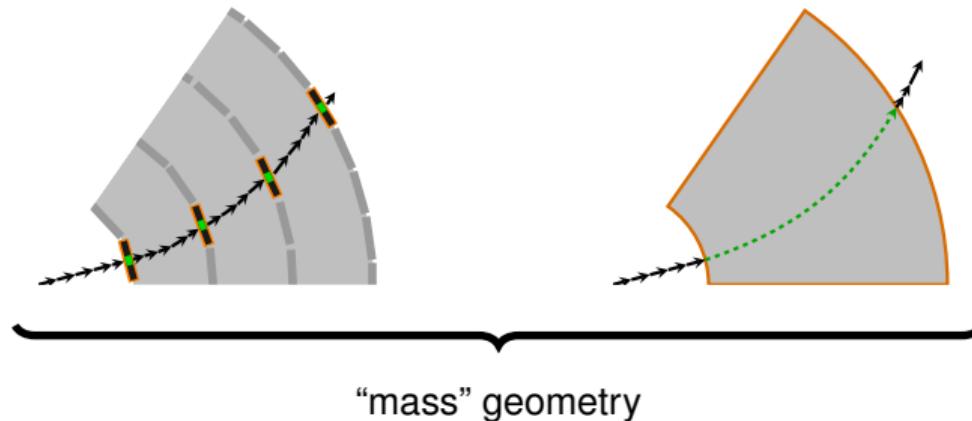

Parameterisation may be realised within:
sub-volume
(many volumes)

Where?

Where?

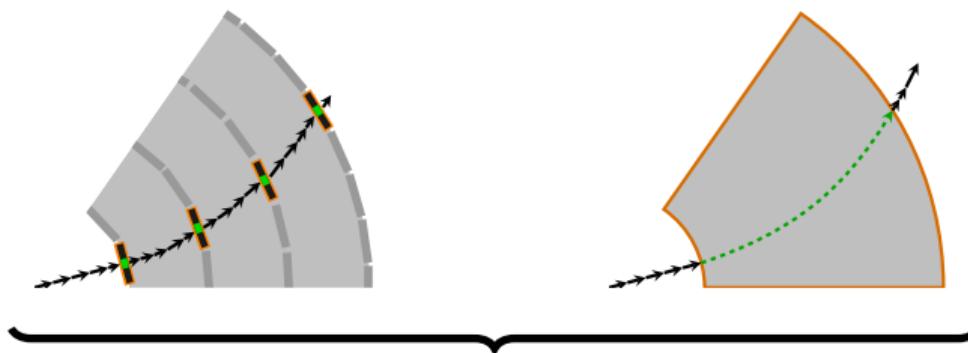

Parameterisation may be realised within:

sub-volume
(many volumes)

detector envelope
(single volume)

assembly of volumes
(non-physical volume)

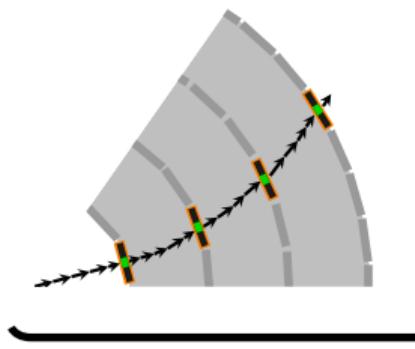

“mass” geometry

Parameterisation may be realised within:

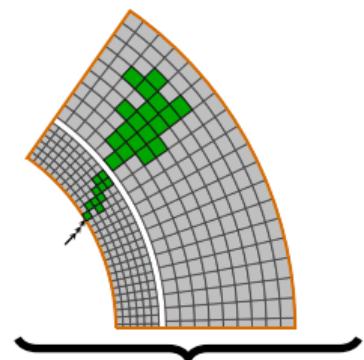

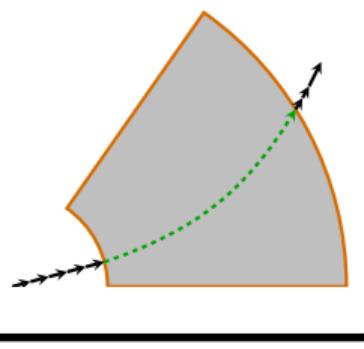

sub-volume
(many volumes)

detector envelope
(single volume)

assembly of volumes
(non-physical volume)

“mass” geometry

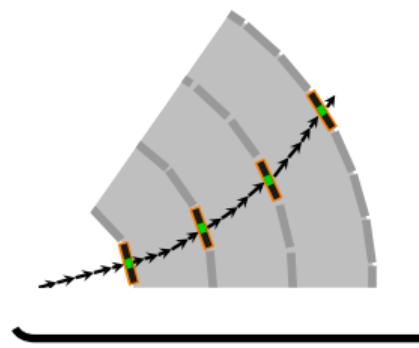

parallel geometry

Parameterisation may be realised within:

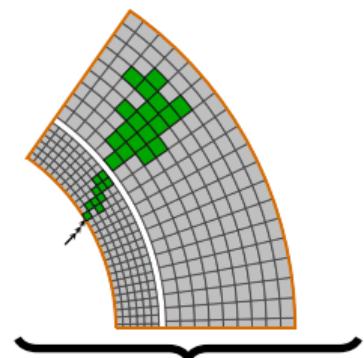

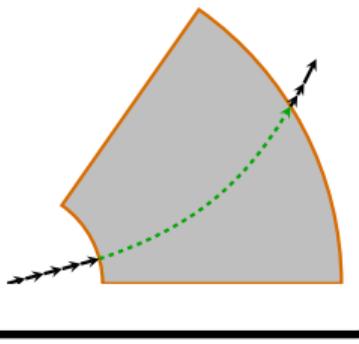

sub-volume
(many volumes)

detector envelope
(single volume)

assembly of volumes
(non-physical volume)

“mass” geometry

parallel geometry

Fast simulation in Geant4 is attached to **G4Region**

(associated to root G4LogicalVolume in either mass or parallel geometry).

G4Region attached to root G4LogicalVolume is shared with daughters (and further ancestors).

G4Region attached to root G4LogicalVolume is shared with daughters (and further ancestors).

```
G4Region(const G4String&) // constructor also registers to G4RegionStore
void G4Region::AddRootLogicalVolume (G4LogicalVolume*) // attach root volume to region
```

G4Region attached to root G4LogicalVolume is shared with daughters (and further ancestors).

```
G4Region(const G4String&) // constructor also registers to G4RegionStore
void G4Region::AddRootLogicalVolume (G4LogicalVolume*) // attach root volume to region
```

for mass geometry:

[examples/extended/parameterisations/Par01/src/Par01DetectorConstruction.cc](#)

```
213 G4Region* caloRegion = new G4Region("EM_calorimeterRegion");
214 caloRegion->AddRootLogicalVolume(calorimeterLog); // calorimeterLog is a G4LogicalVolume
```

for parallel geometry:

[examples/extended/parameterisations/Par01/src/Par01ParallelWorldForPion.cc](#)

```
97 G4Region* ghostRegion = new G4Region("GhostCalorimeterRegion");
98 // ghostLogical is a G4LogicalVolume in parallel geometry, a box made of air encompassing
   both EM&H calorimeters
99 ghostRegion->AddRootLogicalVolume(ghostLogical);
```

G4Region attached to root G4LogicalVolume is shared with daughters (and further ancestors).

```
G4Region(const G4String&) // constructor also registers to G4RegionStore
void G4Region::AddRootLogicalVolume (G4LogicalVolume*) // attach root volume to region
```

for mass geometry:

[examples/extended/parameterisations/Par01/src/Par01DetectorConstruction.cc](#)

```
213 G4Region* caloRegion = new G4Region("EM_calo_region");
214 caloRegion->AddRootLogicalVolume(calorimeterLog); // calorimeterLog is a G4LogicalVolume
```

for parallel geometry:

[examples/extended/parameterisations/Par01/src/Par01ParallelWorldForPion.cc](#)

```
97 G4Region* ghostRegion = new G4Region("GhostCalorimeterRegion");
98 // ghostLogical is a G4LogicalVolume in parallel geometry, a box made of air encompassing
   both EM&H calorimeters
99 ghostRegion->AddRootLogicalVolume(ghostLogical);
```

Which particles?

Parameterisation is usually specified for selected particles.

Which particles?

Parameterisation is usually specified for selected particles.

In Geant4 parameterisation is defined as an additional process that (selected) particle may undergo – **G4FastSimulationManagerProcess**.

Which particles?

Parameterisation is usually specified for selected particles.

In Geant4 parameterisation is defined as an additional process that (selected) particle may undergo – **G4FastSimulationManagerProcess**.

It will invoke parameterisation (if all conditions met):

    {
        position = ...
        // Create energy deposit in the detector
        // This will call appropriate sensitive detector class
        fHitMaker->make(G4FastHit(position, energy / fNbOfHits), aFastTrack);
        generatedHits++;
    }
}
```

How to deposit energy with your model?

since Geant4 v10.7

- ▶ Helper classes (G4FastHit, G4FastSimHitMaker) to deposit energy at given positions (if within the sensitive detector).
- ▶ Geant4 will look for a sensitive detector at given position, and if found – deposit energy.

```
G4FastSimHitMaker::make(const G4FastHit& aHit, const G4FastTrack& aTrack) Par03EMShowerModel.cc
```

```
void Par03EMShowerModel::DoIt(const G4FastTrack& aFastTrack, G4FastStep& aFastStep)
{
    ...
    G4double energy = aFastTrack.GetPrimaryTrack()->GetKineticEnergy();
    ...
    G4ThreeVector position;
    ...
    G4int generatedHits = 0;
    while(generatedHits < fNbOfHits)
    {
        position = ...
        // Create energy deposit in the detector
        // This will call appropriate sensitive detector class
        fHitMaker->make(G4FastHit(position, energy / fNbOfHits), aFastTrack);
        generatedHits++;
    }
}
```

- ▶ G4VFastSimSensitiveDetector must be used as base class in addition to inheritance from the usual base class G4VSensitiveDetector.
- ▶ ProcessHits(...) method must be implemented and describe how hits should be saved in the hit collections.

- ▶ G4VFastSimSensitiveDetector must be used as base class in addition to inheritance from the usual base class G4VSensitiveDetector.
- ▶ ProcessHits(...) method must be implemented and describe how hits should be saved in the hit collections.

G4VFastSimSensitiveDetector

[examples/extended/parameterisations/Par03/include/zPar03SensitiveDetector.hh](#)

```
class Par03SensitiveDetector
: public G4VSensitiveDetector
, public G4VFastSimSensitiveDetector
{
...
    /// Process energy deposit from the full simulation.
    virtual G4bool ProcessHits(G4Step* aStep, G4TouchableHistory* aR0hist) final;
    /// Process energy deposit from the fast simulation.
    virtual G4bool ProcessHits(const G4FastHit* aHit, const G4FastTrack* aTrack,
                               G4TouchableHistory* aR0hist) final;
...
}
```

Step-by-step:

Step-by-step:

1. Implement model that specifies **which** particles, under what conditions and **how** should be parameterised

Step-by-step:

1. Implement model that specifies **which** particles, under what conditions and **how** should be parameterised
user's implementation of **G4VFastSimulationModel**

Step-by-step:

1. Implement model that specifies **which** particles, under what conditions and **how** should be parameterised
user's implementation of **G4VFastSimulationModel**
2. Register the parameterisation(s) for the particles (**which**)

Step-by-step:

1. Implement model that specifies **which** particles, under what conditions and **how** should be parameterised
user's implementation of **G4VFastSimulationModel**
2. Register the parameterisation(s) for the particles (**which**)
by adding to physics list **G4FastSimulationManagerProcess** and activating it for certain particles (recommended: via **G4FastSimulationPhysics**)

Step-by-step:

1. Implement model that specifies **which** particles, under what conditions and **how** should be parameterised
user's implementation of **G4VFastSimulationModel**
2. Register the parameterisation(s) for the particles (**which**)
by adding to physics list **G4FastSimulationManagerProcess** and activating it for certain particles (recommended: via **G4FastSimulationPhysics**)
3. Specify **where** parameterisation takes place

Step-by-step:

1. Implement model that specifies **which** particles, under what conditions and **how** should be parameterised
user's implementation of **G4VFastSimulationModel**
2. Register the parameterisation(s) for the particles (**which**)
by adding to physics list **G4FastSimulationManagerProcess** and activating it for certain particles (recommended: via **G4FastSimulationPhysics**)
3. Specify **where** parameterisation takes place
by creating **G4Region**, attaching a root G4LogicalVolume, and passing it to a constructor of implementation of G4VFastSimulationModel

Step-by-step:

1. Implement model that specifies **which** particles, under what conditions and **how** should be parameterised
user's implementation of **G4VFastSimulationModel**
2. Register the parameterisation(s) for the particles (**which**)
by adding to physics list **G4FastSimulationManagerProcess** and activating it for certain particles (recommended: via **G4FastSimulationPhysics**)
3. Specify **where** parameterisation takes place
by creating **G4Region**, attaching a root G4LogicalVolume, and passing it to a constructor of implementation of G4VFastSimulationModel

Par02FastSimModelEMCal.cc

```
void Par02FastSimModelEMCal::DoIt( const G4FastTrack& aFastTrack, G4FastStep& aFastStep ) {
    aFastStep.KillPrimaryTrack();
    aFastStep.ProposePrimaryTrackPathLength( 0.0 );
    G4double Edep = aFastTrack.GetPrimaryTrack()->GetKineticEnergy();
    G4double Esm; [...] // Esm = smeared Edep
    aFastStep.ProposeTotalEnergyDeposited( Esm );
}
```

Example 1: models

- Tracker: transport it in EM field to the exit-from-envelope, smear momentum;

Par02FastSimModelTracker.cc

```
void Par02FastSimModelTracker::DoIt( const G4FastTrack& aFastTrack, G4FastStep& aFastStep ) {
    G4Track track = * aFastTrack.GetPrimaryTrack();
    G4PathFinder* fPathFinder = G4PathFinder::GetInstance();
    fPathFinder->ComputeStep( ... );
    aFastStep.ProposePrimaryTrackFinalPosition( endTrack.GetPosition() );
}
```

- Calorimeters: particles deposit all energy and are killed (e/ γ in EMCal, hadrons in HCal);

Par02FastSimModelEMCal.cc

```
void Par02FastSimModelEMCal::DoIt( const G4FastTrack& aFastTrack, G4FastStep& aFastStep ) {
    aFastStep.KillPrimaryTrack();
    aFastStep.ProposePrimaryTrackPathLength( 0.0 );
    G4double Edep = aFastTrack.GetPrimaryTrack()->GetKineticEnergy();
    G4double Esm; [...] // Esm = smeared Edep
    aFastStep.ProposeTotalEnergyDeposited( Esm );
}
```

Prior to v10.6, example parameterisations/gflash/gflash1 was parameterisations/gflash/.

Set of examples is extended, to present different options:

Example	<u>gflash1</u>	<u>gflash2</u>	<u>gflash3</u>
Block of homogeneous material	mass geo	mass geo	mass geo
Crystals (readout geometry)	mass geo	mass geo	parallel geo
Sensitive detector	mass geo	mass geo	parallel geo
Envelope for parameterisation	mass geo	parallel geo	mass geo

Additionally, examples/extended/parameterisations/gflash/gflasha contains simple post-event analysis of shower shapes.

All examples feature parametrisation of the same homogeneous calorimeter, only technical details change.

Example 4

- ▶ the only implementation of G4VFastSimulationModel in Geant4 (outside examples/)
- ▶ [arXiv:hep-ex/0001020](https://arxiv.org/abs/hep-ex/0001020)
- ▶ physics reference manual, chapter 18

Example 4

- ▶ the only implementation of G4VFastSimulationModel in Geant4 (outside examples/)
- ▶ [arXiv:hep-ex/0001020](#)
- ▶ physics reference manual, chapter 18
- ▶ parameterisation of electromagnetic cascades:

$$dE(\bar{r}) = Ef(t)dtf(r)drf(\varphi)d\varphi$$

Example 4

- ▶ the only implementation of G4VFastSimulationModel in Geant4 (outside examples/)
- ▶ [arXiv:hep-ex/0001020](#)
- ▶ [physics reference manual, chapter 18](#)
- ▶ parameterisation of electromagnetic cascades:

$$dE(\bar{r}) = Ef(t)dtf(r)drf(\varphi)d\varphi$$

- ▶ flat distribution in azimuthal angle $f(\varphi) = \frac{1}{2\pi}$

Example 4

- ▶ the only implementation of G4VFastSimulationModel in Geant4 (outside examples/)
- ▶ [arXiv:hep-ex/0001020](#)
- ▶ physics reference manual, chapter 18
- ▶ parameterisation of electromagnetic cascades:

$$dE(\bar{r}) = Ef(t)dtf(r)drf(\varphi)d\varphi$$

- ▶ flat distribution in azimuthal angle $f(\varphi) = \frac{1}{2\pi}$
- ▶ $f(t)$ and $f(r)$ parametrised as a function of particle's energy (E) and medium (Z)

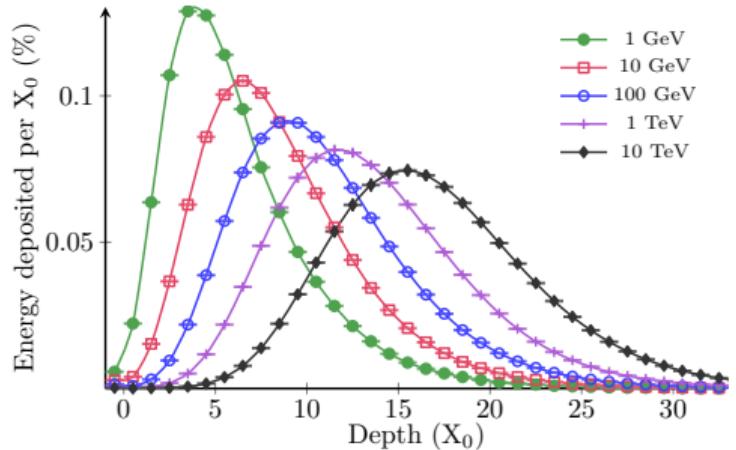

Example 4

- ▶ the only implementation of G4VFastSimulationModel in Geant4 (outside examples/)
- ▶ [arXiv:hep-ex/0001020](#)
- ▶ physics reference manual, chapter 18
- ▶ parameterisation of electromagnetic cascades:

$$dE(\bar{r}) = Ef(t)dtf(r)drf(\varphi)d\varphi$$

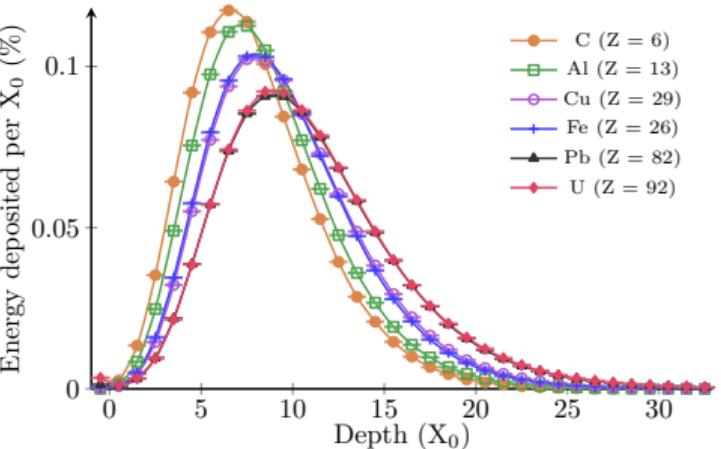

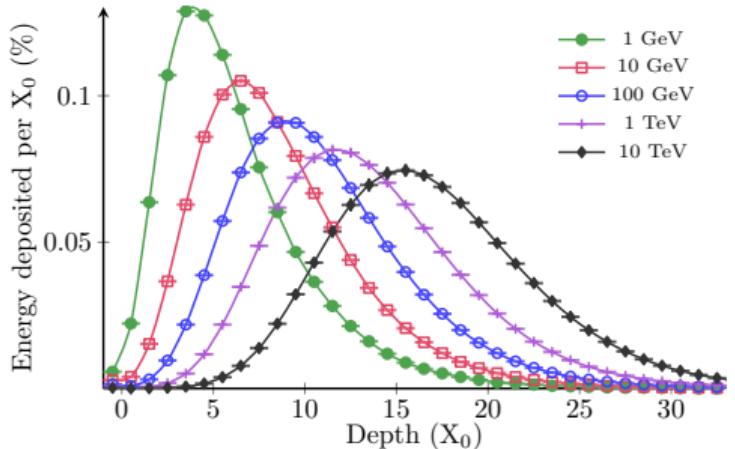

- ▶ flat distribution in azimuthal angle $f(\varphi) = \frac{1}{2\pi}$
- ▶ $f(t)$ and $f(r)$ parametrised as a function of particle's energy (E) and medium (Z)
- ▶ t and r are expressed in units of X_0 and R_M

Example 4 - longitudinal profile

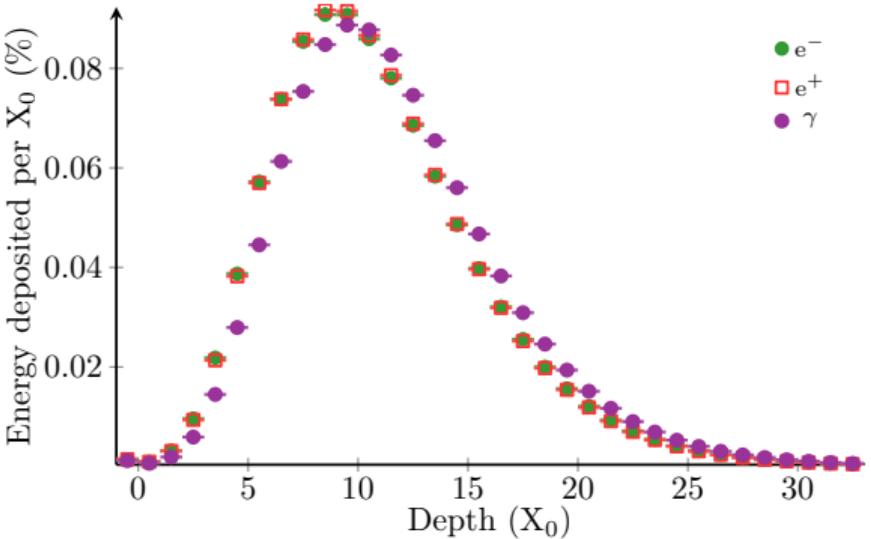

$$T \sim \ln E$$

Example 4 - longitudinal profile

$$T \sim \ln E$$

Example 4 - longitudinal profile

Example 4 - longitudinal profile

$$f(t) = \left\langle \frac{1}{E} \frac{dE(t)}{dt} \right\rangle = \frac{(\beta t)^{\alpha-1} \beta e^{-\beta t}}{\Gamma(\alpha)}$$

Example 4 - longitudinal profile

$$f(t) = \left\langle \frac{1}{E} \frac{dE(t)}{dt} \right\rangle = \frac{(\beta t)^{\alpha-1} \beta e^{-\beta t}}{\Gamma(\alpha)}$$

- ▶ shower maximum $T = \frac{\alpha-1}{\beta}$

Example 4 - longitudinal profile

$$f(t) = \left\langle \frac{1}{E} \frac{dE(t)}{dt} \right\rangle = \frac{(\beta t)^{\alpha-1} \beta e^{-\beta t}}{\Gamma(\alpha)}$$

- ▶ shower maximum $T = \frac{\alpha-1}{\beta}$
- ▶ Description dependent on $y = \frac{E}{E_c}$:

$$T = \ln y + l_1$$

$$\alpha = l_2 + (l_3 + \frac{l_4}{Z}) \ln y$$

Example 4 - longitudinal profile

$$f(t) = \left\langle \frac{1}{E} \frac{dE(t)}{dt} \right\rangle = \frac{(\beta t)^{\alpha-1} \beta e^{-\beta t}}{\Gamma(\alpha)}$$

- ▶ shower maximum $T = \frac{\alpha-1}{\beta}$
- ▶ Description dependent on $y = \frac{E}{E_c}$:

$$T = \ln y + I_1$$

$$\alpha = I_2 + (I_3 + \frac{I_4}{Z}) \ln y$$

Example 4 - longitudinal profile

$$f(t) = \left\langle \frac{1}{E} \frac{dE(t)}{dt} \right\rangle = \frac{(\beta t)^{\alpha-1} \beta e^{-\beta t}}{\Gamma(\alpha)}$$

A.1 Homogeneous Media

A.1.1 Average longitudinal profiles

► shower maximum $T = \frac{\alpha-1}{\beta}$

$$\begin{aligned} T_{hom} &= \ln y - 0.858 \\ \alpha_{hom} &= 0.21 + (0.492 + 2.38/Z) \ln y \end{aligned}$$

► Description dependent on $y = \frac{E}{E_c}$:

A.1.2 Fluctuated longitudinal profiles

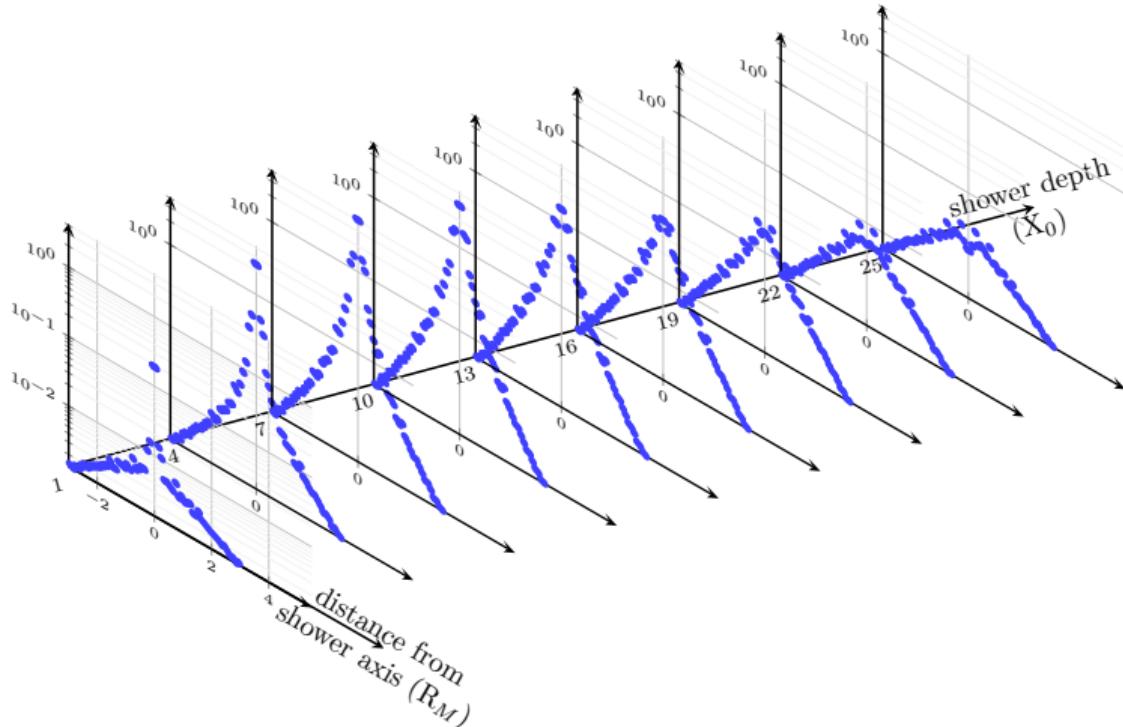

$$T = \ln y + I_1$$

$$\alpha = I_2 + (I_3 + \frac{I_4}{Z}) \ln y$$

$$\begin{aligned} \langle \ln T_{hom} \rangle &= \ln(\ln y - 0.812) \\ \sigma(\ln T_{hom}) &= (-1.4 + 1.26 \ln y)^{-1} \\ \langle \ln \alpha_{hom} \rangle &= \ln(0.81 + (0.458 + 2.26/Z) \ln y) \\ \sigma(\ln \alpha_{hom}) &= (-0.58 + 0.86 \ln y)^{-1} \\ \rho(\ln T_{hom}, \ln \alpha_{hom}) &= 0.705 - 0.023 \ln y \end{aligned}$$

[arXiv:hep-ex/0001020](https://arxiv.org/abs/hep-ex/0001020)

Example 4 – lateral profile

Example 4 – lateral profile

$$f(r) = \left\langle \frac{1}{dE(t)} \frac{dE(t, r)}{dr} \right\rangle$$

Example 4 – lateral profile

$$f(r) = \left\langle \frac{1}{dE(t)} \frac{dE(t, r)}{dr} \right\rangle = p f_{\text{core}}(r) + (1-p) f_{\text{tail}}(r) =$$

Example 4 – lateral profile

$$f(r) = \left\langle \frac{1}{dE(t)} \frac{dE(t, r)}{dr} \right\rangle = pf_{\text{core}}(r) + (1-p)f_{\text{tail}}(r) =$$

$$= p \frac{2rR_{\text{core}}^2}{(r^2 + R_{\text{core}}^2)^2} + (1-p) \frac{2rR_{\text{tail}}^2}{(r^2 + R_{\text{tail}}^2)^2}$$

Example 4 – lateral profile

$$f(r) = \left\langle \frac{1}{dE(t)} \frac{dE(t, r)}{dr} \right\rangle = pf_{\text{core}}(r) + (1-p)f_{\text{tail}}(r) =$$

$$= p \frac{2rR_{\text{core}}^2}{(r^2 + R_{\text{core}}^2)^2} + (1-p) \frac{2rR_{\text{tail}}^2}{(r^2 + R_{\text{tail}}^2)^2}$$

Description dependent on $\tau = \frac{t}{T}$:

$$R_{\text{core}}(\tau) = r_1 + r_2\tau$$

$$R_{\text{tail}}(\tau) = r_3 \left(e^{r_4(\tau - r_5)} + e^{r_6(\tau - r_7)} \right)$$

$$p(\tau) = r_8 \exp \left(\frac{r_9 - \tau}{r_{10}} - \exp \left(\frac{r_9 - \tau}{r_{10}} \right) \right)$$

Example 4 – lateral profile

$$f(r) = \left\langle \frac{1}{dE(t)} \frac{dE(t, r)}{dr} \right\rangle = pf_{\text{core}}(r) + (1-p)f_{\text{tail}}(r) =$$

$$= p \frac{2rR_{\text{core}}^2}{(r^2 + R_{\text{core}}^2)^2} + (1-p) \frac{2rR_{\text{tail}}^2}{(r^2 + R_{\text{tail}}^2)^2}$$

Description dependent on $\tau = \frac{t}{T}$:

$$R_{\text{core}}(\tau) = \mathbf{r}_1 + \mathbf{r}_2 \tau$$

$$R_{\text{tail}}(\tau) = \mathbf{r}_3 \left(e^{\mathbf{r}_4(\tau - \mathbf{r}_5)} + e^{\mathbf{r}_6(\tau - \mathbf{r}_7)} \right)$$

$$p(\tau) = \mathbf{r}_8 \exp \left(\frac{\mathbf{r}_9 - \tau}{\mathbf{r}_{10}} - \exp \left(\frac{\mathbf{r}_9 - \tau}{\mathbf{r}_{10}} \right) \right)$$

Example 4 – lateral profile

$$f(r) = \left\langle \frac{1}{dE(t)} \frac{dE(t, r)}{dr} \right\rangle = pf_{\text{core}}(r) + (1-p)f_{\text{tail}}(r) =$$

$$= p \frac{2rR_{\text{core}}^2}{(r^2 + R_{\text{core}}^2)^2} + (1-p) \frac{2rR_{\text{tail}}^2}{(r^2 + R_{\text{tail}}^2)^2}$$

Description dependent on $\tau = \frac{t}{T}$:

$$R_{\text{core}}(\tau) = \mathbf{r}_1 + \mathbf{r}_2 \tau$$

$$R_{\text{tail}}(\tau) = \mathbf{r}_3 \left(e^{\mathbf{r}_4(\tau - \mathbf{r}_5)} + e^{\mathbf{r}_6(\tau - \mathbf{r}_7)} \right)$$

$$p(\tau) = \mathbf{r}_8 \exp \left(\frac{\mathbf{r}_9 - \tau}{\mathbf{r}_{10}} - \exp \left(\frac{\mathbf{r}_9 - \tau}{\mathbf{r}_{10}} \right) \right)$$

A.1.3 Average radial profiles

$$\begin{aligned} R_{C,hom}(\tau) &= z_1 + z_2 \tau \\ R_{T,hom}(\tau) &= k_1 \{ \exp(k_3(\tau - k_2)) + \exp(k_4(\tau - k_2)) \} \\ p_{hom}(\tau) &= p_1 \exp \left\{ \frac{p_2 - \tau}{p_3} - \exp \left(\frac{p_2 - \tau}{p_3} \right) \right\} \end{aligned}$$

with

$$\begin{aligned} z_1 &= 0.0251 + 0.00319 \ln E \\ z_2 &= 0.1162 + -0.000381 Z \\ k_1 &= 0.659 + -0.00309 Z \\ k_2 &= 0.645 \\ k_3 &= -2.59 \\ k_4 &= 0.3585 + 0.0421 \ln E \\ p_1 &= 2.632 + -0.00094 Z \\ p_2 &= 0.401 + 0.00187 Z \\ p_3 &= 1.313 + -0.0686 \ln E \end{aligned}$$

A.1.4 Fluctuated radial profiles

$$\begin{aligned} \tau_i &= \frac{t}{\langle t \rangle_i} \frac{\exp(\langle \ln \alpha \rangle)}{\exp(\langle \ln \alpha \rangle) - 1} \\ N_{Spot} &= 93 \ln(Z) E^{0.876} \\ T_{Spot} &= T_{hom}(0.698 + 0.00212 Z) \\ \alpha_{Spot} &= \alpha_{hom}(0.639 + 0.00334 Z) \end{aligned}$$

[ExGflashSensitiveDetector.hh](#)

```
class ExGflashSensitiveDetector: public G4VSensitiveDetector,  
    public G4VGFlashSensitiveDetector {  
    ...  
    virtual G4bool ProcessHits(G4Step*,G4TouchableHistory*);  
    virtual G4bool ProcessHits(G4GFlashSpot*aSpot,G4TouchableHistory*);  
};
```

GVFlashHomoShowerTuning can be used to change parameters ($l_1, l_2, \dots, r_1, \dots$)

Example 4 – model

[ExGflashSensitiveDetector.hh](#)

```
class ExGflashSensitiveDetector: public G4VSensitiveDetector,  
    public G4VGFlashSensitiveDetector {  
    ...  
    virtual G4bool ProcessHits(G4Step*,G4TouchableHistory*);  
    virtual G4bool ProcessHits(G4GFlashSpot*aSpot,G4TouchableHistory*);  
};
```

GVFlashHomoShowerTuning can be used to change parameters ($l_1, l_2, \dots, r_1, \dots$)

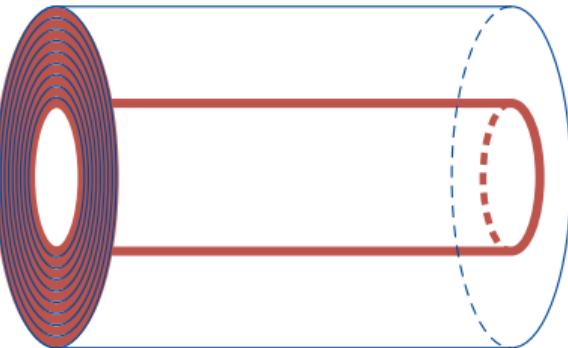

Sampling calorimeter For simulation in sampling detectors use [GFlashSamplingShowerParameterisation](#) and [GFlashSamplingShowerTuning](#). Readout should collect signal from both active and passive material (e.g. by constructing SD in parallel world). Those calorimeters have not been tested in Geant4, so implementation of GFlash in Geant4 may require further work (which is on-going).

Example 5:

[examples/extended/parameterisations/Par04](#)

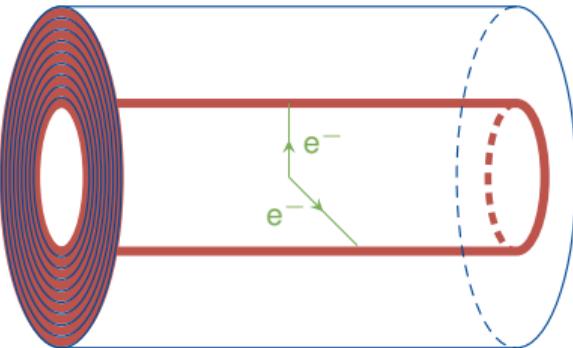

Example 5

- ▶ examples/extended/parameterisations/Par04 new example since Geant4 11.0 release
- ▶ Detector geometry is simplistic and easy to configure
- ▶ Collider-style concentric cylinders with up to two materials (active and optionally passive)

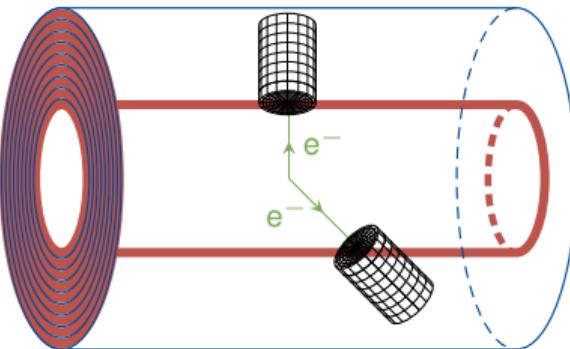

Example 5

- ▶ examples/extended/parameterisations/Par04 new example since Geant4 11.0 release
- ▶ Detector geometry is simplistic and easy to configure
- ▶ Collider-style concentric cylinders with up to two materials (active and optionally passive)
- ▶ Particle direction and position is measured at the entrance to calorimeter (many possible ways to do it: we chose fast sim model that is attached to calorimeter)

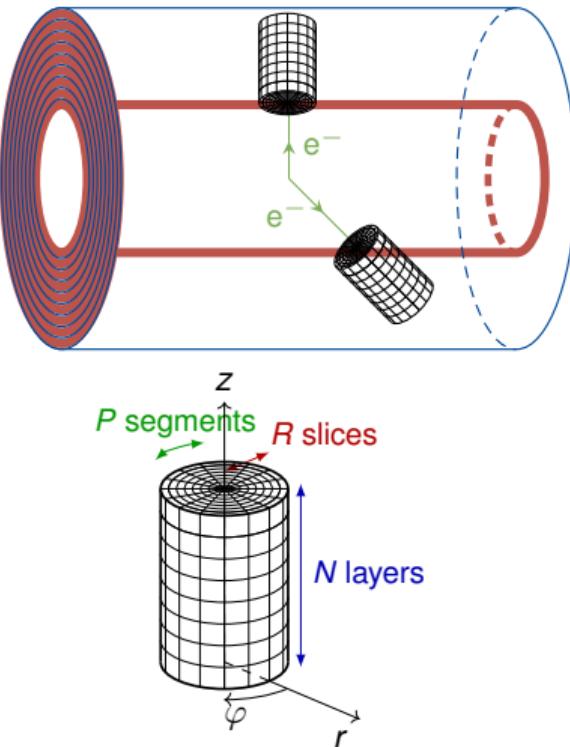

Example 5

- ▶ examples/extended/parameterisations/Par04 new example since Geant4 11.0 release
- ▶ Detector geometry is simplistic and easy to configure
- ▶ Collider-style concentric cylinders with up to two materials (active and optionally passive)
- ▶ Particle direction and position is measured at the entrance to calorimeter (many possible ways to do it: we chose fast sim model that is attached to calorimeter)
- ▶ Scoring of energy deposits is done relative to the particle direction
- ▶ Similar granularity ‘pictures’ are obtained independently on angle

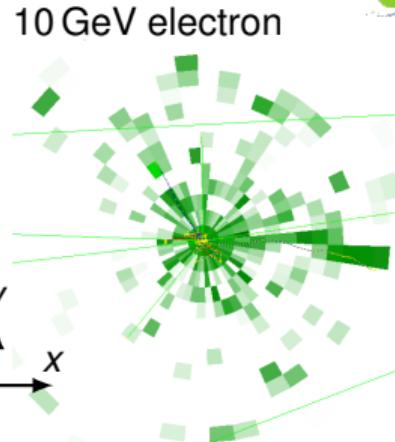

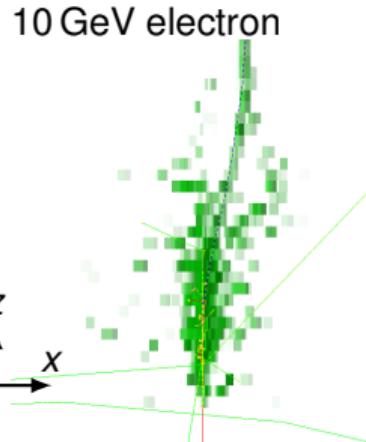

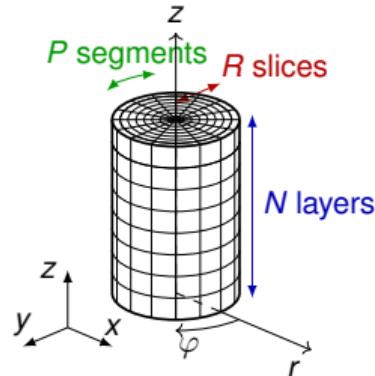

Example 5

- ▶ examples/extended/parameterisations/Par04 new example since Geant4 11.0 release
- ▶ Detector geometry is simplistic and easy to configure
- ▶ Collider-style concentric cylinders with up to two materials (active and optionally passive)
- ▶ Particle direction and position is measured at the entrance to calorimeter (many possible ways to do it: we chose fast sim model that is attached to calorimeter)
- ▶ Scoring of energy deposits is done relative to the particle direction
- ▶ Similar granularity ‘pictures’ are obtained independently on angle
- ▶ Granularity of shower deposition is configurable

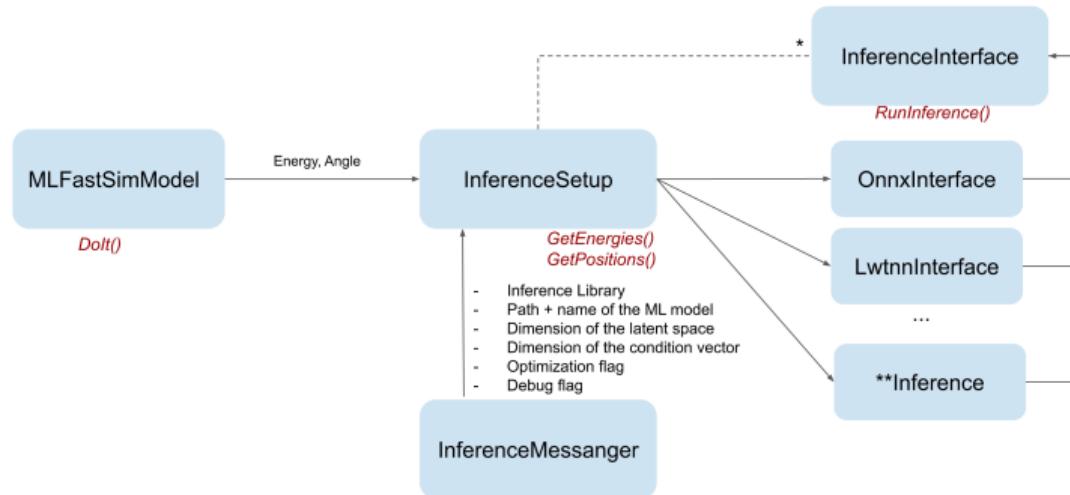

Example 5 – EM showers

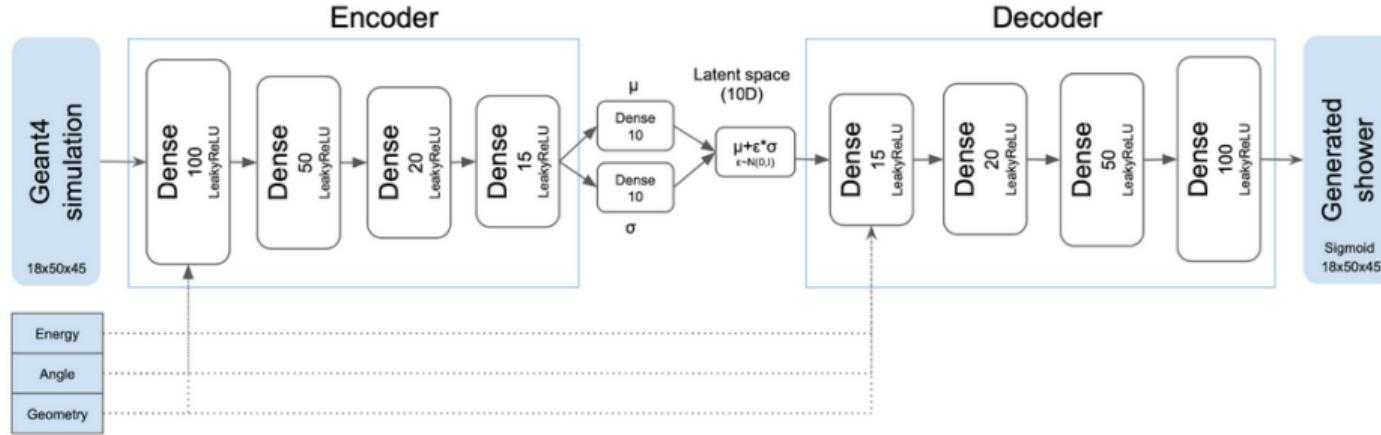

- ▶ Example uses 0.3 mm Si and 1.4 mm W layers
- ▶ Readout granularity is $\Delta r \times \Delta\varphi \times \Delta z = 2.3 \text{ mm} \times \frac{2\pi}{50} \times 3.4 \text{ mm}$ aiming for $\Delta r \approx 0.25 R_M$ and $\Delta z \approx 0.6 X_0$
- ▶ Number of readout cells is $R \times P \times N = 18 \times 50 \times 45$ aiming for 95% containment of 1 TeV particles
- ▶ **Open access dataset for SiW (and scintillator-Pb) released 10.5281/zenodo.6082201**
- ▶ This dataset is a base of ML studies, including CaloChallenge.

Example 5 – inference within C++ framework

- ▶ Fast simulation with ML within Geant4
- ▶ Demonstrates how to incorporate inference libraries (ONNX Runtime, LWTNN)
- ▶ Par04 can run full and fast simulation (if any of the inference libraries is available, e.g. via LCG)

Example 5 – ML model

Variational autoencoder that is a subject of study in our group. Provided model is trained on the specified geometry, it **requires changes with the changes to the geometry**. More details on work on generalisation are discussed in our webpage: g4fastsim.web.cern.ch

- ▶ Fast simulation can be used within Geant4;

- ▶ Fast simulation can be used within Geant4;
- ▶ Hooks to take over control in chosen volumes/for chosen particles;

- ▶ Fast simulation can be used within Geant4;
- ▶ Hooks to take over control in chosen volumes/for chosen particles;
- ▶ Seamless mix of detailed and parametric simulation;

- ▶ Fast simulation can be used within Geant4;
- ▶ Hooks to take over control in chosen volumes/for chosen particles;
- ▶ Seamless mix of detailed and parametric simulation;
- ▶ Examples in examples/extended/parameterisations/;
